Pet Adoption Management System

CCINFOM S40K - Group 03

Members:
Aceveda, Jiahe S.
Dy, Jasmine Yzabelle Y.
Nucum, Mark Stephen M.
Pielago, James C.

Term 1
A.Y. 2026 - 2027

I. Group Composition

- Aceveda, Jiahe S.
- Dy, Jasmine Yzabelle Y.
- Nucum, Mark Stephen M.
- Pielago, James C.

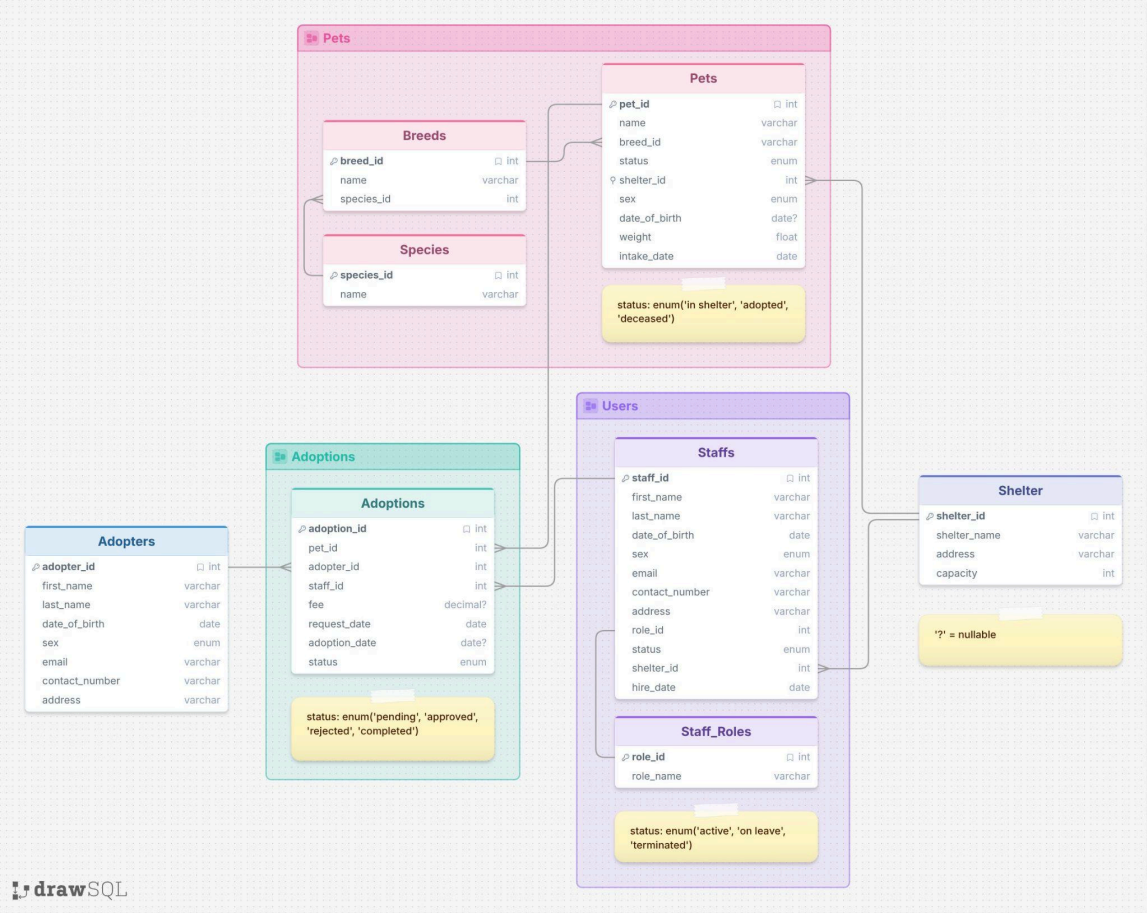

II. Rationale for DB App Development

A pet adoption management system is used to manage and track pets available for adoption, staff who process them, adopters seeking them, and adoption transactions. With these in mind, the containing data are relational and fragile when managed and changed manually on an Excel spreadsheet or smaller files, especially as the amount of data continues to grow. A DBMS allows efficient management and organization of related records in one system through primary and foreign keys. It also allows controlled access and a better way to sync related data, which becomes difficult and slow in Excel, especially when setting up constraints such as preventing inconsistent and/or invalid data. This proposed DB App allows adoption centers to manage and retrieve information more efficiently than using Excel or smaller files.

III. Records Management

Pets Record Management *FK = Foreign Key*	(pet ID, name, species, breed, status, shelter ID (FK), weight, sex, date of birth, intake date) Viewing pet records based on species, breed, date of birth, sex, status (in shelter, adopted, deceased), and/or intake date	Assigned to Jiahe Aceveda
Staff Record Management	(staff ID, first name, last name, role id (FK), sex, status, shelter id (FK), contact number, email, address, hire date) Viewing staff records based on first and last names, status (active/on leave/terminated), shelter ID	Assigned to James Pielago
Adopters Record Management	(adopter ID, first name, last name, date of birth, sex, email, contact number, address)	Assigned to Jasmine Dy

	Viewing adopter records based on first and last names	
Adoptions Record Management	(adoption ID, pet ID (FK), adopter ID (FK), adoption date, staff ID (FK), request date, status) Viewing adoption records based on adoption date, staff ID, status (pending, approved, rejected, completed)	Assigned to Mark Nucum
Shelters Record Management	(shelter ID, shelter name, address, capacity) Viewing shelter records based on capacity	Assigned to Jasmine Dy

IV. Reports to be Generated

Adoptions and Intake Summary Report *Adoptions + Pet*	Total number of pets adopted vs taken in, what species, for a given year month	Assigned to James Pielago, Mark Nucum
Staff Adoptions Report *Adoptions + Staff*	Ordered list of staff and their total number of adoptions handled for a given year	Assigned to Jiahe Aceveda, Jasmine Dy

V. Declaration of Generative AI Use

Our group used *Claude's Sonnet 5 Model (by Anthropic)* to assist in the following:

- Identifying possible reports for the Database Application Proposal.

The tool was not used to generate the full contents of this proposal or the core design decisions.
